We wish you many exciting discoveries and nice rides with your senseBox:bike!

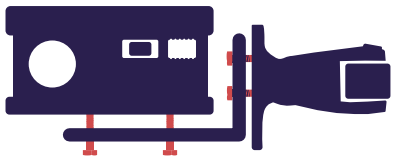

List of parts

1. senseBox:bike
2. L Bracket
3. Tube Adapter
4. hex screwdriver
5. 4 x screws 1 cm
6. App senseBox:bike

Google (Android)

Apple (iphone)

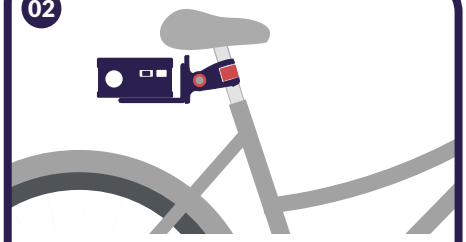

01

senseBox + Adapter

Attach the adapter, the bracket, and the senseBox:bike using 4 screws.

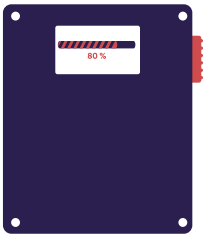

02

Mounting and Adjusting

Mount the set under the saddle and adjust the inclination using the grey button on the adapter.

03

On/Off

Turn on the senseBox:bike using the switch on the side and wait until all sensors have initialized.

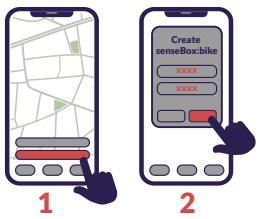

04

openSenseMap

Log in to openSenseMap in settings to share data.

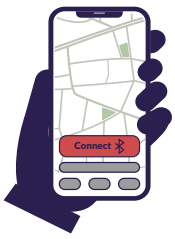

05

Create a Box

Create a box, select model and campaign (optional). Name will be public.

06

Connecting

Connect to the senseBox:bike. You'll find the ID directly on the display.

07

Start

Click the "Start" button to begin your ride and start collecting data.

One-time

How the app works ?

Live Data Access
Once your senseBox app is successfully connected to your senseBox:bike, you'll have access to live data displayed during your bike ride. This data includes various environmental parameters and information about the urban environment and the bike lane condition.

Data Recording and Upload
You can choose to record this data at the phone for later review or upload the data to the openSenseMap. To upload you need to link your user account to the app, which can be done through the app menu. Once linked, your data will automatically upload to openSenseMap during recording, allowing you to share it with others and contribute to environmental research and mapping.

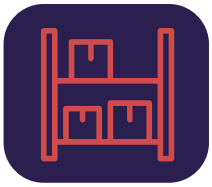

Private Zones
The app also lets you set up private zones where no data is collected or uploaded to openSenseMap. This feature, found in the settings menu, ensures your privacy and lets you customize data collection based on your needs.

Care for the equipment

To ensure the optimum performance and service life of your device, observe the following :

Wipe the sense box with a soft cloth to remove dust and dirt (cloth cleaning).

Store in a dry, clean place, away from sunlight and high temperatures.

Avoid extreme rainfall as it is not waterproof and has electronic components.

Check the attachments to the bike regularly make sure it is secure and tight.

Troubleshooting Guide

Connection Problems
- Ensure senseBox is powered on and within range of your smartphone.
- Check Bluetooth and app permissions.
- Try reconnecting by closing and reopening the app.

Sensor Issues
- Ensure the senseBox is correctly assembled and powered on.
- Make sure to connect with the senseBox:bike after the loading animation on the display is finished

Data Recording Errors
- Maybe update the app and the code by accessing sensebox.de
- Factory Reset: Reset the senseBox and set it up again
